URGENT NOTICE

Stage 3

It has been determined that the well site is slow in production due to many factors extended high temperatures, which can require higher water demand. The water table has declined, and we are trying to meet the anticipated water requirement.

We have been hauling water to help compensate for the water shortage and water supply in the holding tanks.

We need your help! We are asking for all customers to reduce their water demand by cutting back resources and conserving as much as possible. We suggest complying with the following guidelines to reduce wastage.

- Be conscious of unnecessary water running.
- Ensure there are no water/irrigation leaks on your property.
- Report leaks to us at **928-717-2619 ASAP** so we can temporarily shut off service to reduce waste.
- Take full advantage of monsoon rainfall rather than using automated irrigation. Turn irrigation control clocks off.
- Washing vehicles, misting systems, filling pools, spas, fountains is **highly discouraged**.
- Additional service lines and meter installations will be **discouraged**.
- Any other water intensive activity is **highly discouraged**.

Together we can get through this crisis. Know that we are working diligently on our efforts. We ask you to do the same.

(Granite Mountain Water Company reserves the right to temporarily discontinue water service to patrons who fail to comply with the mandatory requirements.)
